TrCoinsTrading : I used Signal R. It socket programming. Binance, Paribu,Okex,FTX, Huobi, Gate.io, Chiliz, BtcTürk, api instant value endpoints. Telegram message api added.

The screenshot displays a complex trading interface with a grid of market data. The interface is divided into several sections: 'Genel' (General) at the top left, 'Coins' in the middle left, 'Fiat Token' in the middle right, and 'Mail' at the top right. The main area is a grid of tables, each representing a different cryptocurrency pair. Each table contains columns for 'Buy', 'Sell', 'Last Price', '24h Change', and '24h Volume'. The coins listed include AMETRY, BITCTÖRK, PARIBU, BINANCE, HAOBI, FTX, OKEX, KUCOON, and GATE. The fiat tokens listed include TRY, USD, and EUR. The mail section shows a list of email addresses and their corresponding market data. The interface is dark-themed and includes various navigation and filtering options.
